

# GitHub Codespace VS Code in the Cloud

## Using Codespace

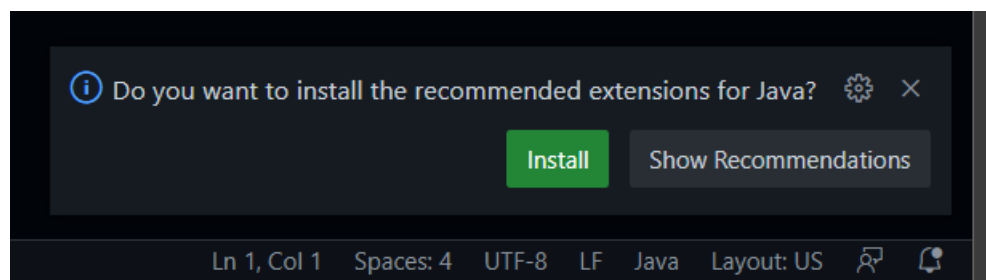

1. Go to the assignment repository and select "Code" and "Create codespace on main"

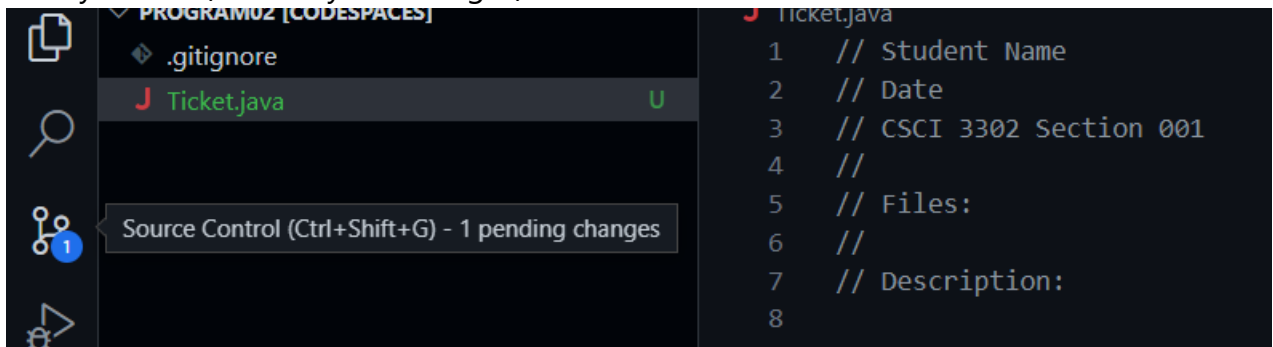

2. Add new files (if necessary) using the panel on the left. Be sure to put .java extension.

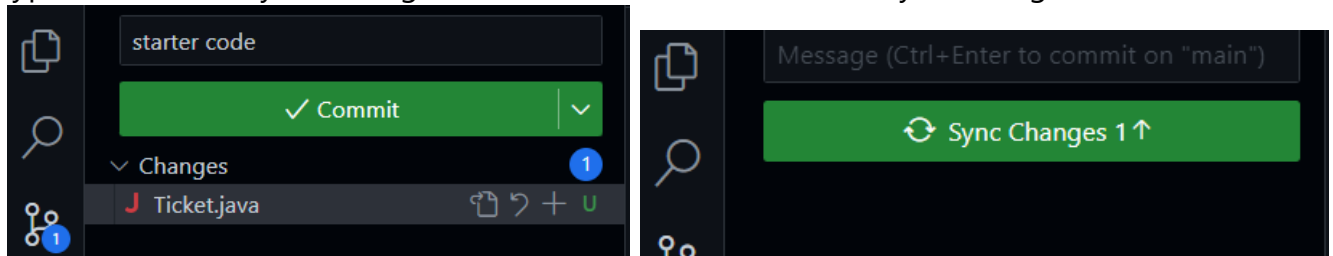

3. The first time you add a java file, Codespace will ask you to install recommended extensions for Java. Note: the JDK should already be installed on the server.

4. To save your file (commit your changes) click the source control button on the left.

5. Type a note about your changes and click "Commit" and then "Sync Changes".

6. To run your program, click the Java Run button on the top right (or on the left).
